

# **Nurse Call Patient Hand Units**

Designed with the user in mind

## **Nurse Call Patient Hand Units**

## Designed with the user in mind

#### **Iconic design**

A well designed hand unit is essential for patient well being. Static Systems' patient hand units are amongst an elite group of products that can claim to be iconic. The design set new standards and has become the benchmark product in its field.

#### Patient-centric design

The design of our patient hand units was achieved following consultation with user groups and professional bodies, including the Royal National Institute of the Blind (RNIB). Units have an easy-grip profile, reassuringly tactile buttons and distinguishing colours. All adding up to a thoroughly researched design inspired by a simple aim – to bring ease of use and peace of mind to patients.

#### **Round-the-clock protection**

To assist in infection control measures, enhanced protection against bacteria is provided by a silver-based antimicrobial agent incorporated during the manufacturing process. Units are sealed to IP67 and can cleaned with a sterilizing wipe to eliminate bio-hazards and reduce cross-infection risks between patients.

#### **Extended life cycle**

Units are designed to be robust and essentially maintenance-free, comprising a minimal number of component parts. Damaged cables can be easily replaced.

#### **Outstanding features...**

Stylishly contoured to fit comfortably in the hand, the carefully considered design provides a number of features that enable the patient to quickly identify their needs and make confident choices, whilst the robust construction ensures suitability for use within the hospital environment.

## Acoustically designed for high quality speech

Sealed microphone and speaker

#### Distinguishing colours

for patient ease of use, as recommended by the RNIB

#### **Tactile buttons**

for user reassurance

#### **Push buttons**

control the patient's lighting environment

#### Radio and TV functions

provided for in-bed entertainment

### Patented quick-release

plug prevents injury to the patient and damage to equipment

#### Cable strain relief

to minimise potential cable damage

Replaceable cable extends product life

#### Linen clip

prevents the hand unit from slipping out of reach

#### **Versatile solutions**

To assist in the provision of appropriate patient care a range of hand units is available, with each hand unit operating 'intelligently' in line with individual nurse call system functionality.
